Frontend engineer who ships. Built production features serving high-traffic applications, specializing in React, TypeScript, and performance optimization for complex async workflows. Strong debugger with experience in large monorepos.

EXPERIENCE

Magic Labs — Software Engineer

Jun 2024 – Present | Remote

- Developed core wallet and session flows in a large Next.js monorepo serving high-traffic production workloads.
- Optimized performance and responsiveness across complex UIs, ensuring smooth interactions and reduced re-renders via memoization, stable state patterns, and React Query cache tuning.
- Implemented multi-step UI workflows with persistent state using Zustand and shared query hook systems.
- Worked extensively with asynchronous signing and auth flows, including fallback logic paths, event-driven UI, and request interception.
- Debugged deeply layered issues across frontend, API, and blockchain interactions with minimal logging context.
- Built and maintained reactive UI behavior driven by streaming and event-based data flows, ensuring consistent state under concurrent interactions and asynchronous updates.
- Led cross-app component architecture standards for reusability and maintainability.

Magic Labs — Customer Success Engineer

Jan 2023 – Jun 2024 | Remote

- Acted as technical liaison for 30+ enterprise customers integrating Magic's auth and wallet solutions.
- Developed onboarding guides, reference implementations, and troubleshooting workflows.
- Created internal tooling and documentation to streamline customer setup and support.
- Reduced integration friction by identifying and relaying product gaps and developer pain points.
- Transitioned into a full-time software engineering role based on demonstrated code contributions and system knowledge.

TECHNICAL SKILLS

TypeScript, React, Next.js, React Query, Redux, Zustand, Tailwind CSS, Panda CSS, Event loop scheduling, async state flow, DOM & Virtual DOM behavior, memoization strategies, Chrome DevTools, REST, GraphQL, CI/CD, Monorepos, Performance Profiling

PROJECT HIGHLIGHTS

- Built the full staking/unstaking and rewards claim experience for Newt, including UI flows, state management, and GraphQL-driven data synchronization.
- Served as primary maintainer of our shared UI component library, shaping component patterns, accessibility practices, and reuse across multiple product surfaces.
- Implemented single-iframe chain switching logic to enable seamless network transitions without reloading session state.
- Developed Sign-In with Ethereum (SIWE) login flow integration, aligning wallet UX with emerging web3 auth standards.

EDUCATION

BloomTech (Lambda School) — Full Stack Web Development, 2021

California Institute of the Arts — BFA in Music, Multi-Focus Guitar Performance, 2011
